Exclusion of people by abandoning physical structures - the digital version of your identity does not replace the physical version, digital is just another option, not the only possibility for you to access services and products.

Lack of education - having digital tools is not related to people's ability to know how to use these tools. In addition to technology having to advance, it is very important that people are educated to use these technologies;

Lack of participation in the construction of identity - if the governance of the ID system is not robust and has been designed from various interests and with civic participation, it is possible that it will generate negative impacts for invisible groups;

Deepening the exclusion of immigrants - digital identity should not further disadvantage people with uncertain legal status, such as immigrants and unidentified people;

Lack of capacity for technology to change and update according to people - digital identity should not limit people's ways of existing, as technology has a different logic to humans and can make the process more rigid and square. This is the reality for trans people, where they need to make a huge effort to ensure that they are being identified in the right way.
